UMassAmherst

New England Forests: A Globally Important Resource

New England is one of the most heavily forested parts of the United States. Forested areas provide critical benefits to its population and an essential corridor for plant and animal movement between the southern Appalachians and the boreal forests of Canada in a time of climate change.

MA Forested Cover

All Roads

Home range: 6,400 – 38,000 acres
Density: 1 bear per 1,400 acres

Home range: 8,000 – 24,500 acres
Density: 1 bobcat per 3,200 acres

1 pair per 1,660 acres

Natures Network

North Atlantic Landscape Conservation Cooperative

<http://connecttheconnecticut.org>

Nature's Network is a collaborative effort facilitated by the U.S. Fish and Wildlife Service Science Applications program that brings together partners from 13 states, federal agencies, nongovernmental organizations, and universities to identify the best opportunities for conserving and connecting intact habitats and ecosystems and supporting imperiled species to help ensure the future of fish and wildlife across the Northeast region.

<https://umassdsl.org/data/ecoConnect>

Connecting to UMass Wifi

1. In the WiFi settings on your phone/computer/tablet select the UMass network
2. Open up a web browser (IT suggests using Safari or Firefox)
3. Manually type in the address bar:
<http://login.wireless.umass.edu> (or **scan the QR code**)
4. Either a page telling you that this site is unsecure will present itself OR the UMass wireless login page will appear
5. If it is a page telling you the website is unsecure, click “More Details” or “Advanced” at the bottom and click on the link to visit the page anyway
6. You should then be on the UMass wireless network login page
7. Enter the credentials below
 - Username: 78456876
 - Password: 58861667
